

## DANCING FALL

1. Take an 8-10mm diameter 20 cm long steel bolt. It will be very nice if you can get a long stud. Also get a few steel washers slightly larger than the diameter of the bolt. Stand the bolt vertically and place the washers on top. The washers will go down the bolt in a very funny “dancing” fall. For the most spectacular result you’ll have to try a few different sizes of washers.
