

## SAIL BOAT

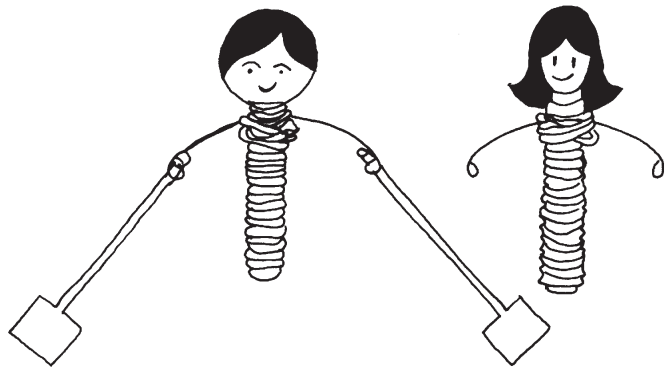

The dried pods of the *Spathodea campanulata* tree - the African Tulip tree make an excellent boat.

1. You will need a half dried boat shaped pod of the African Tulip Tree. You will also need card sheet, wire, broom sticks, string, glue and a strong adhesive like M-seal.

2. Stick 1.5-cm squares on 10-cm long broomsticks to make two oars.

3. Wrap thread on a thick stick to make the puppet's body. Twist wire on the neck and have two ends jutting out to make the hands. Attach the hands to the oars. Stick a cardsheet face and colour it to make a man and a woman.

4. Glue the thick stick puppets to the base of the boat with a strong glue like M-seal. Now place the boat in a water tank and enjoy it sailing.
